

Project Name	Technological Line for Separation of Secondary Waste for Waste Management Centre in Soligorsk
Start – End	August 2010 – December 2011
Project Value	1.161.000 EUR
Slovenian Funding	500.000 EUR
Recipient Country/ Donation Recipient	Belarus / CUE Ekokompleks, Soligorsk
CRS CODE	CRS CODE 14050
Project Description	<p>Technological line for separation of secondary waste was built with the donation from Republic of Slovenia. This sorting line enables the separation of the secondary raw materials for reuse as raw material. It also positively influences the development of the EkoKompleks production sector since the sufficient quantities of secondary raw materials are available for manufacturing which results in lower production costs as well as in lower dependency on suppliers of primary raw materials. At the same time this project contributes to the development of the entire waste management and conversion centre and increases the rate of waste being recycled. Thus the negative environmental impact is reduced.</p>
Project Phase	Project is concluded.
