

<b>Project Name</b>	System for the Protection of Workers with the Control of Air Quality
<b>Start – End</b>	November 2017 – February 2018
<b>Project Value</b>	193.118,10 EUR
<b>Slovenian Funding</b>	53.000 EUR
<b>Recipient Country/ Donation Recipient</b>	Bosnia and Herzegovina / Mine Kakanj
<b>CRS CODE</b>	CRS CODE 32220
<b>Project Description</b>	In July 2004, the Government of BiH has adopted an action plan for restructuring and modernization of Rudnik Kakanj. The plan foresees a reduction in the number of employees, investments in modernization of the technological process and monitoring of parameters in the air ventilation. The latter has not been regulated so far, and the staff did not have up-to-date information on air quality and possible changes in the presence of gases, and therefore preventive action against work accidents was not possible. Within the project, a new modern system for monitoring the parameters of air in the mine was procured and the dispatch center was built with all the communication arrays they need for a successful connection with the system.
<b>Project Phase</b>	The project is concluded.
