

<b>Project Name</b>	Design and Construction of Wetlands in Petnjica
<b>Start–End</b>	January 2019–December 2022
<b>Project Value</b>	449.070 EUR
<b>Slovenian Funding</b>	224.535 EUR
<b>Recipient Country/ Donation Recipient</b>	Montenegro / Ministry of Sustainable Development and Tourism
<b>Project Contractor</b>	Limnos d.o.o. Ljubljana in Intermost d.o.o., Podgorica
<b>CRS CODE</b>	CRS CODE 14022
<b>Project Description</b>	<p>The municipality of Petnjica did not have a system for the collection and treatment of urban waste water; households were using septic tanks. Therefore, municipal waste water was leaking directly into the groundwater, which presented a great environmental problem and a threat to the health safety of the population. Within the project, project documentation was prepared first, and in the second phase, constructed wetland (CW) with a capacity of 600 PE was built. CW is an ecological solution for the treatment of wastewater using plants. The project will help to reduce the amount of harmful emissions and the concentration of waste water and improve the health safety of the population.</p>
<b>Project Phase</b>	The project is concluded.
