

Project Name	Modernisation and Reconstruction of Public Lightning System in the Municipality of Tetovo
Start–End	November 2017–June 2019
Project Value	303.710 EUR
Slovenian Funding	134.000 EUR
Recipient Country/ Donation Recipient	North Macedonia / Municipality of Tetovo
Project Contractor	SHTT »Its Iskratel« the telecommunication system LLC - Skopje
CRS CODE	CRS CODE 23183
Project Description	The existing street lighting in the municipality of Tetovo is outdated and energy inefficient. Classic bulbs consume a lot of energy and their maintenance is expensive. The public lighting system is not centralized, therefore there is no proper control over its operation. The project foresees the replacement of existing conventional light bulbs with LED lights. LED lights are more efficient (consuming up to ten times less electricity) and have a longer lifetime compared to classic bulbs. The new street lightning system have brought significant savings in electricity consumption, maintenance of street lightning and has significant effect on reduction of the greenhouse emissions into the environment.
Project Phase	The project is concluded.
