

<b>Project Name</b>	Design and Construction of the Dumpsite in Žabljak Municipality
<b>Start–End</b>	December 2015–September 2017
<b>Project Value</b>	479.460 EUR
<b>Slovenian Funding</b>	239.730 EUR
<b>Recipient Country/ Donation Recipient</b>	Montenegro / Ministry of Sustainable Development and Tourism
<b>Project Contractor</b>	Consortium of companies: Institute of Ecological Engineering d.o.o., Maribor and Intermost d.o.o., Podgorica
<b>CRS CODE</b>	CRS CODE 14050
<b>Project Description</b>	Existing waste was transferred to a temporary repository. The bottom of the current landfill was laid with foil, which prevents the seepage of leachate into groundwater. Old waste was placed on the foil and covered with appropriate wood species which foster evapotranspiration and thereby effectively reduce the water flow through the waste. The leachate is purified in the wetland, which was constructed at the landfill. The project helps preserve the environment and improves the quality of life of local residents and tourists.
<b>Project Phase</b>	The project is concluded.
