

<b>Project Name</b>	Technological Line for Separation of Secondary Waste for Waste Management Centre in Soligorsk
<b>Start–End</b>	August 2010–December 2011
<b>Project Value</b>	1.161.000 EUR
<b>Slovenian Funding</b>	500.000 EUR
<b>Recipient Country/ Donation Recipient</b>	Belarus / CUE Ekokompleks, Soligorsk
<b>CRS CODE</b>	CRS CODE 14050
<b>Project Contractor</b>	Hidroinženiring d.o.o. Ljubljana
<b>Project Description</b>	<p>Technological line for separation of secondary waste was built with the donation from Republic of Slovenia. This sorting line enables the separation of the secondary raw materials for reuse as raw material. It also positively influences the development of the EkoKompleks production sector since the sufficient quantities of secondary raw materials are available for manufacturing which results in lower production costs as well as in lower dependency on suppliers of primary raw materials. At the same time this project contributes to the development of the entire waste management and conversion centre and increases the rate of waste being recycled. Thus the negative environmental impact is reduced.</p>
<b>Project Phase</b>	Project is concluded.
