| <b>Project Name</b>                              | Constructed Wetlands in Prrenjas Municipality  |
| <b>Start–End</b>                                 | November 2017–   |
| <b>Project Value</b>                             | 200.000 EUR  |
| <b>Slovenian Funding</b>                         | 100.000 EUR  |
| <b>Recipient Country/<br/>Donation Recipient</b> | Albania / Municipality of Prrenjas   |
| <b>Project Contractor</b>                        | BCCD Tirana  |
| <b>CRS CODE</b>                                  | CRS CODE 14022   |
| <b>Project Description</b>                       | <p>The Pishkash Veri settlement is located in the south-eastern part of Albania. It's facing great difficulties due to unregulated municipal and industrial wastewaters. Wastewaters are discharged directly into the groundwater without pre-treatment, thereby endangering the safety of the health of the population. As part of the project, constructed wetlands with a capacity of 750 PE will be built. Constructed wetlands will consist of several basins insulated with foil in which the water will be filtered, purified and polished. The project will help reduce the harmful emissions and concentrations of waste water and will improve the health safety of the inhabitants.</p> |
| <b>Project Phase</b>                             | The project was not implemented.   |
