

<b>Project Name</b>	Water Supply Network in Suburban Settlement of City of Mostar
<b>Start–End</b>	January 2023–December 2024
<b>Project Value</b>	557.760 EUR
<b>Slovenian Funding</b>	257.760 EUR
<b>Recipient Country/ Donation Recipient</b>	Bosnia and Herzegovina / City of Mostar
<b>Project Contractor</b>	JP Vodovod d.o.o. Mostar, ECCON INŽINJERING d.o.o. Čapljina
<b>CRS CODE</b>	CRS CODE 14031
<b>Project Description</b>	<p>Most of the population of Mostar is supplied with water through the city's central water supply system, while the settlement of Žitomislíci is still supplied with water from wells or cisterns. In 2022, the municipal administration, together with the municipally owned public utility Vodovod, started the preparation of project documentation for the water supply network in Žitomislíci. The main project has been prepared, the necessary permits are in the process of being obtained and the land to be used for the construction is owned by the State. The project foresees the construction of a water pipeline from the wells in Biletić polje to the bridge on the Neretva and then across the bridge to Žitomislíci. The project has a significant impact for the inhabitants of the Municipality of Mostar, as the improvement of the water supply system in the suburban settlement of Žitomislíci would ensure sufficient drinking water for the needs of all inhabitants.</p>
<b>Project Phase</b>	The project is being implemented.
