| <b>Project Name</b>                              | Design and Construction of the Waste Sorting Unit  |
| <b>Start–End</b>                                 | May 2017–December 2025   |
| <b>Project Value</b>                             | 1.558.000 EUR  |
| <b>Slovenian Funding</b>                         | 560.000 EUR  |
| <b>Recipient Country/<br/>Donation Recipient</b> | Bosna and Herzegovina / Municipality of Donji Vakuf  |
| <b>Project Contractor</b>                        | Riko Ekos d.o.o., Loški Potok  |
| <b>CRS CODE</b>                                  | CRS CODE 14050   |
| <b>Project Description</b>                       | One of the main priorities of the Municipality of Donji Vakuf is the construction of the sorting hall for municipal waste, as it faces high costs for deportation of the waste to the regional landfill. The sorting is expected to reduce the amount of transported waste by 60 percent. New technologies and good practice in the field of waste management were implemented. The project will contribute to environment protection, reduced ground waters pollution and recycling of part of the waste. |
| <b>Project Phase</b>                             | The project is being implemented.  |
