

<b>Project Name</b>	Reconstruction of wastewater treatment plant, including replacement of mechanical and electrical equipment and sewer pipes
<b>Start–End</b>	November 2019–February 2024
<b>Project Value</b>	12.637.382 EUR
<b>Slovenian Funding</b>	2.840.756 EUR
<b>Recipient Country/ Donation Recipient</b>	Ukraine / Utility Company “Zhytomyr Vodokanal”, City of Zhytomyr
<b>Project Contractor</b>	Esotech, d.d., Velenje
<b>CRS CODE</b>	CRS CODE 14022
<b>Project Description</b>	The collected municipal wastewater in Zhytomyr is being treated by two biological wastewater treatment plants. A detailed reconstruction and upgrade plan have been carried out within the project. It was followed by the construction of treatment plant facilities, the replacement and reconstruction of technical parts and equipment and the installation of an automatic control system. With the donation of the Republic of Slovenia, a pumping station was constructed to supply wastewater, which previously was treated in the first treatment plant, to the reconstructed treatment plant. The refurbishment of the treatment plant provides modern facilities for treatment of all wastewater, in accordance with national legislative requirements and Directive 91/271/ EEC for wastewater treatment and discharge into the river.
<b>Project Phase</b>	The project is concluded.
